

ABSTRACT OF THE DISCLOSURE

Sub A' When the drafting operation with a display drafting apparatus and the generating operation with a control program schema generator proceed concurrently or separately, a step  
5 of temporarily storing the device of interest for display can be omitted to enhance the drafting efficiency.

Conventionally, drafting the display was conducted in such a way as to temporarily store (memorize, or store with the file) a device of a controller for use, set up the  
10 specifications of the display at the steps ST30, ST3, ST5, and ST6, and then call back the temporarily stored device to perform the operation of step ST1. This invention starts with the selection of a desired device at the step ST1, without need of the temporary storage, resulting in enhanced drafting  
15 efficiency.
